The Problem

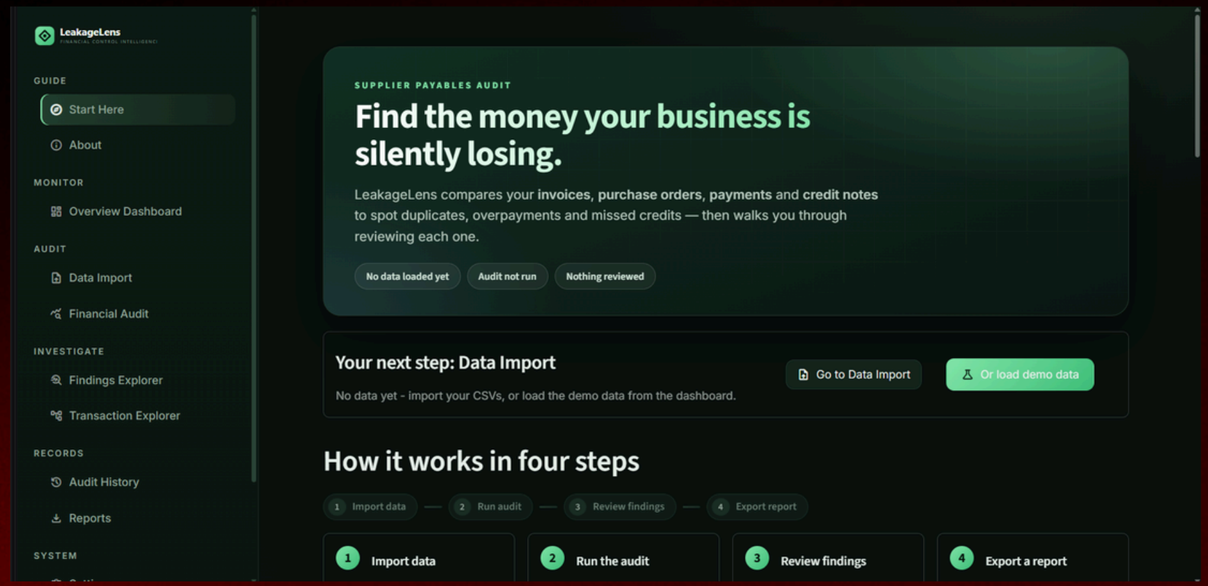

Businesses Lose Money Without Realizing It

- Businesses process thousands of financial transactions every day, making it difficult to identify every discrepancy.
- The same invoice may be paid more than once, suppliers may charge incorrect amounts, and credit notes may be overlooked.
- Manual financial audits are time-consuming and can miss hidden discrepancies.
- As a result, businesses may lose money without knowing where the problem occurred.

Our Solution

One Platform to Detect Hidden Financial Losses

- LeakageLens automatically analyzes financial records to identify suspicious transactions and potential financial discrepancies
- It detects duplicate payments, overbilling, missed credit notes, and payment mismatches.
- The platform ranks suspicious transactions by priority and explains why each transaction was flagged.
- This helps finance teams investigate potential losses and make informed decisions.

How LeakageLens Works

From Financial Data to Actionable Insights

Services 01

First, LeakageLens loads invoices, purchase orders, payments, and credit notes into Exasol Personal

Services 02

Next, SQL queries connect the datasets and compare expected amounts with actual payments

Services 03

The system then applies detection rules and fuzzy matching to identify suspicious transactions.

Services 04

Each finding receives an explanation, a confidence score, and an estimate of potential financial exposure.

Services 05

Finally, the results are presented in a dashboard that helps auditors investigate suspicious transactions.

Why Exasol Personal?

Powerful Analytics for Financial Reconciliation

*E*xasol Personal serves as the core data platform for LeakageLens.

It performs SQL joins, aggregations, and financial reconciliation across large datasets.

By processing the core analytical workload inside Exasol, LeakageLens can systematically compare thousands of financial records.

This demonstrates how Exasol can support practical financial analytics and risk detection.

Demonstration and Results

- LeakageLens is designed to analyze 10,000 synthetic financial transaction records.
- The system identifies suspicious payments, mismatched amounts, potential duplicate invoices, and overlooked credits.
- Each finding is supported by evidence from the underlying transaction records.
- The dashboard displays the number of detected cases and the estimated potential financial exposure.
- The demonstration will show one suspicious transaction in detail, explain why it was flagged, and demonstrate how a finance team can investigate it.
- Actual results and financial figures will be reported after testing the application.

Impact and Conclusion

Make Hidden Financial Losses Visible

LeakageLens helps businesses identify suspicious transactions that might otherwise remain undetected.

It reduces the need to manually search through large volumes of financial records and helps finance teams prioritize important discrepancies.

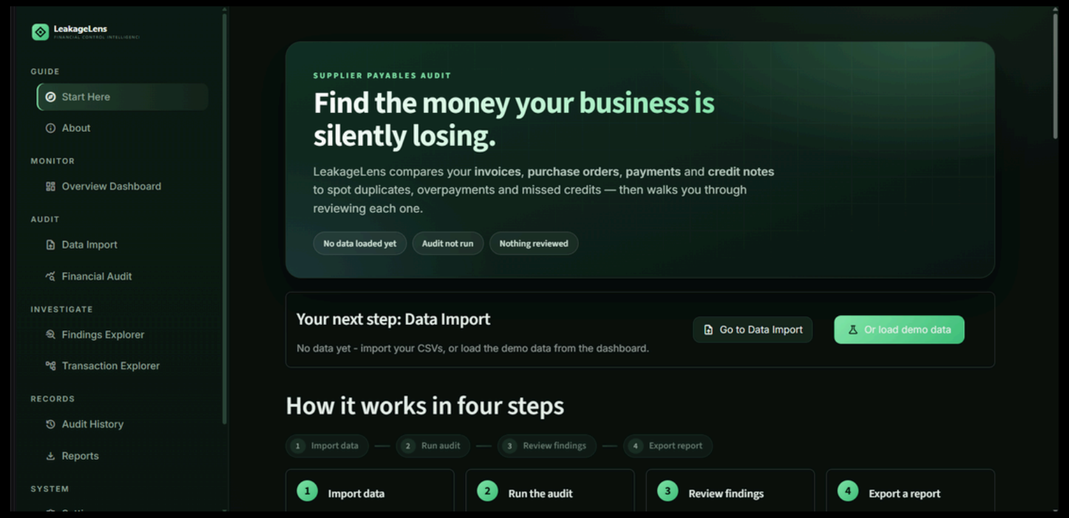

Our goal is to help businesses investigate potential losses faster, improve financial oversight, and make better decisions.

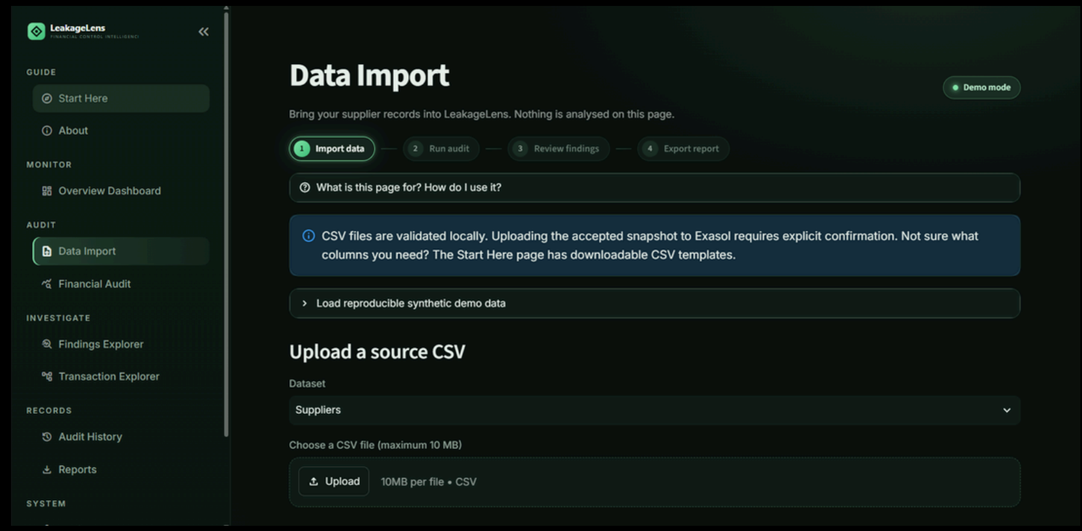

LeakageLens: Find the discrepancy. Understand the evidence. Recover what is rightfully yours.

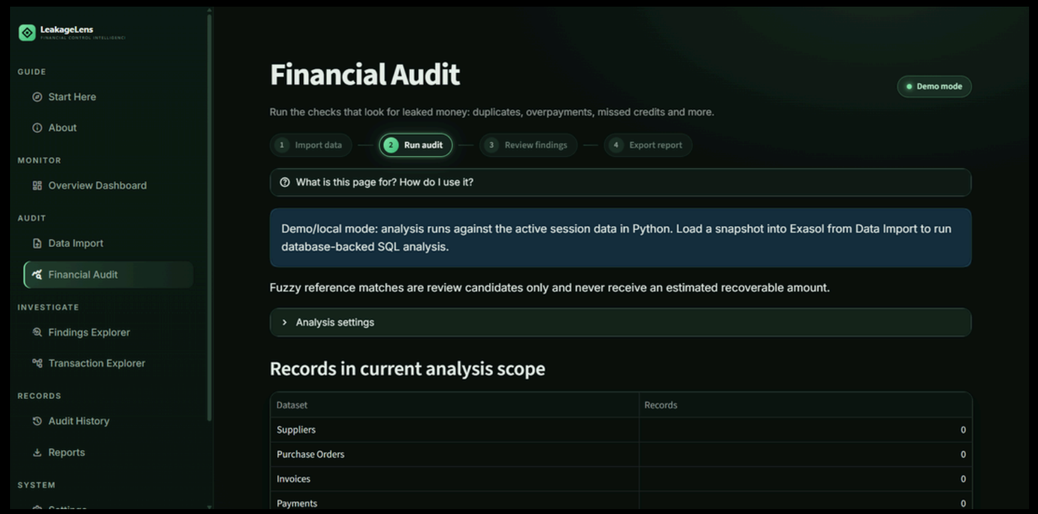

By combining Exasol analytics with explainable detection rules, LeakageLens turns disconnected financial data into actionable audit evidence.

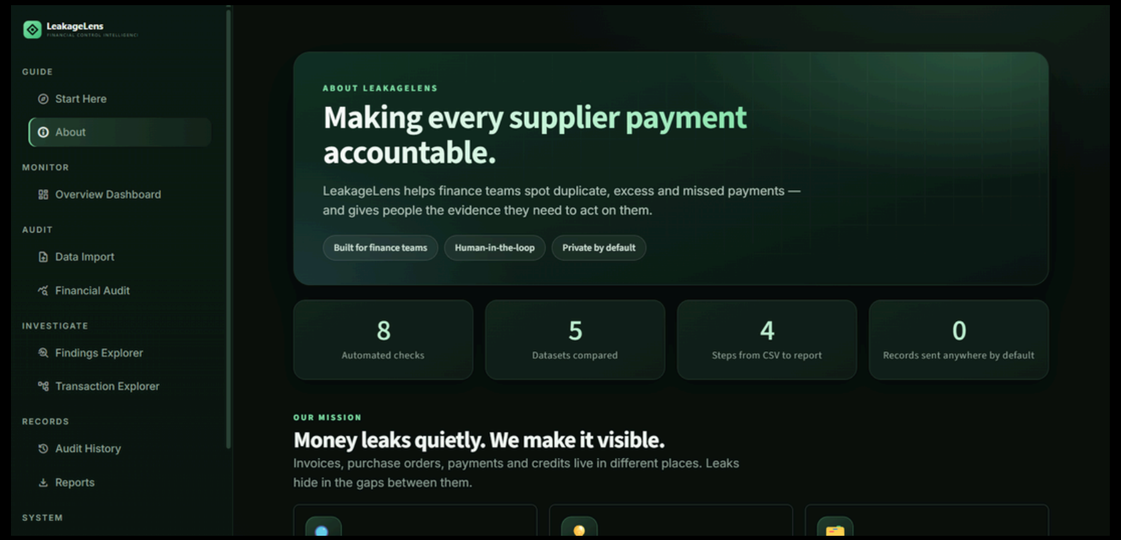

Future Scope

- **Multi-currency support**: convert currencies so mixed data can be compared.
- **ERP connections:** pull data directly instead of uploading CSVs.
- **Pre-payment guard: check every invoice before the payment run and hold likely duplicates or overbilling, so money never leaves.**
- **Ask-your-data copilot:** type a question like "which suppliers overbill us most?" and get the SQL, the answer and the supporting records.
- **One-click recovery pack**: auto-draft the dispute email to the supplier, with the evidence attached.
- **Supplier leakage score:** a risk ranking and heatmap showing which suppliers leak money most often.
- **Learns from reviewers:** Confirmed and False Positive decisions tune the alerts, so noise drops over time.

SYSTEM
SUPPLIER PAYABLES AUDIT
Find the money your business is silently losing.
LeakageLens compares your invoices, purchase orders, payments and credit notes to spot duplicates, overpayments and missed credits — then walks you through reviewing each one.
No data loaded yet
Audit not run
Nothing reviewed
Your next step: Data Import
No data yet - import your CSVs, or load the demo data from the dashboard.
Go to Data Import
Or load demo data
How it works in four steps
1 Import data — 2 Run audit — 3 Review findings — 4 Export report
1 Import data
2 Run the audit
3 Review findings
4 Export a report

Demo mode
Bring your supplier records into LeakageLens. Nothing is analysed on this page.
1 Import data — 2 Run audit — 3 Review findings — 4 Export report
What is this page for? How do I use it?
CSV files are validated locally. Uploading the accepted snapshot to Exasol requires explicit confirmation. Not sure what columns you need? The Start Here page has downloadable CSV templates.

Financial Audit
Demo mode
Run the checks that look for leaked money: duplicates, overpayments, missed credits and more.
1 Import data — 2 Run audit — 3 Review findings — 4 Export report
What is this page for? How do I use it?
Demo/local mode: analysis runs against the active session data in Python. Load a snapshot into Exasol from Data Import to run database-backed SQL analysis.
Fuzzy reference matches are review candidates only and never receive an estimated recoverable amount.

OUR MISSION
Money leaks quietly. We make it visible.
Invoices, purchase orders, payments and credits live in different places. Leaks hide in the gaps between them.

Thank You.
